

MONTHLY NEWS MAGAZINE OF ACECRETE ADHESIONS INDIA PRIVATE LIMITED

Happy to announce that we have added one more feather to our cap.....
“EMERGING UNIT”

Yes, we ACEBOND's have added another feather to our cap by being recognised as “EMERGING UNIT” from Central Excise department, Mangalore

ACEBOND is recognised as highest central excise tax payer in our region and thus we are honoured with this award by Asst. Commissioner from central excise department on the occasion of 'Central Excise Day' held at Corporation Bank Auditorium, Millennium building, Pandeshwar, Mangalore.

We all think that we're responsible for our own success, but we couldn't do it without each other. Now we take this opportunity to thank each and everyone who have contributed to our success. We would like to express gratitude to our dealers, distributors & stakeholders and a special thanks to our team for their support, dedication and hardwork, without which we could not have achieved this today.

We look forward for your prolonged support in the future to help us make our cap more colourful.

Go for a COOL ROOF system and stay cool...

1. LOW SLOPED ROOFS

Single-ply membranes are pre-fabricated sheets rolled onto the roof and attached with mechanical fasteners, adhered with chemical adhesives, or held in place with ballast (gravel, stones, or pavers).

How they can be made cool: Reformulate or coat black membranes to make them reflective.

Built-up roofs consist of a base sheet, fabric reinforcement layers, and (usually) a dark protective surface layer.

How they can be made cool: The surface layer can be made different ways, and each has cool options:

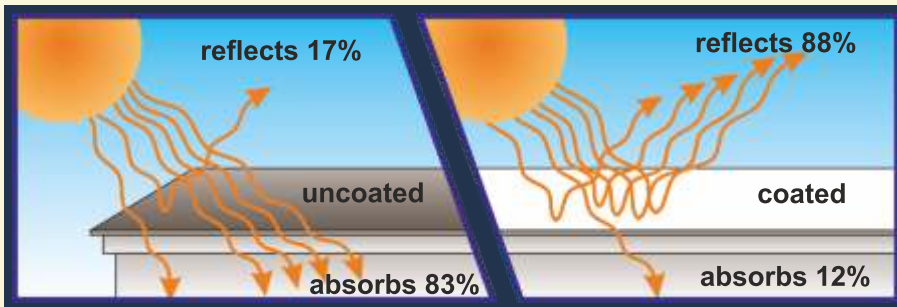

- Substitute reflective marble chips or gray slag for dark gravel in a flood coat of asphalt
- Use reflective mineral granules or a factory-applied coating

rather than a dark coating on a mineral surfaced sheet

- Apply a cool coating directly on top of a dark asphaltic emulsion coating.

Modified bitumen sheet membranes have one or more layers of plastic or rubber material with reinforcing fabrics, and are surfaced with mineral granules or a smooth finish. These can

How they can be made cool: Buy cool asphalt shingles, which use specially coated granules that provide better solar reflectance. (Coating existing asphalt shingles to make them cool, however, is not normally recommended or approved by shingle manufacturers.) Other roof shingles can be coated at the factory or in the field to make them more reflective.

also be used to surface a built-up roof—known as a "hybrid" roof.

How they can be made cool: Pre-coat with a cool roof coating at the factory.

Spray polyurethane foam roofs are constructed by mixing two liquid chemicals together that react and expand to form one solid piece that adheres to the roof. Foams are highly susceptible to mechanical, moisture, and UV damage, and rely on a protective coating.

How they can be made cool: The protective coatings are usually already reflective, and offer cool roof performance.

2. STEEP SLOPED ROOFS

Shingle roofs consist of overlapping panels made from a variety of materials such as fiberglass asphalt, wood, polymers, or metals.

Tile roofs can be made of clay, slate, or concrete. Tiles can be glazed to provide waterproofing or coated to provide customized colors and surface properties.

How they can be made cool: Some are naturally reflective enough to achieve cool roof standards, and surface treatments can transform tiles with low solar reflectance into cool roof tiles.

3. LOW AND STEEP SLOPED ROOFS

Metal roofs are available with natural metallic finishes, oven-baked paint finishes, or granular coated surfaces.

How they can be made cool: Unpainted metals are typically good solar reflectors but poor thermal emitters, so they rarely satisfy low slope cool roof requirements. Painting a metal roof can increase its solar reflectance and thermal emittance, allowing it to achieve cool roof status. Alternatively, you can apply cool reflective coatings.

TESTIMONIALS...

Mr. Aravind Candiaparcар

Managing Partner of M/S R.B.S CANDIAPARCAR

We have been using ACEBOND products since 3 years for many of our projects. We found very good in terms of quality of products, technical services and mainly ontime delivery with good packing style. We used **Acefix tile adhesives, Acefix 2 in 1, Aceplast, Aceblock adhesives and Grouts** from ACEBOND.

One of our prestigious project with association of ACEBOND is 'HEALTHWAY HOSPITAL PROJECT' at Old Goa constructed by M/S R.B.S Candiaparcар, a renowned construction firm in Goa. We would like to thank them for their immense support for in-time completion of our project and wish them all the best for their future endeavour.

Project : "HEALTHWAY HOSPITAL", Old Goa, constructed by M/S R.B.S Candiaparcар

Time and again we have been proving that training programs will equip our employees, masons, engineers and dealers with thorough understanding about our corporate culture, product knowledge and working policies to set an example of perfection, dedication and commitment to maintain ACECRETE ADHESIONS INDIA PRIVATE LIMITED, as one of top construction chemicals manufacturing company.

Training becomes vital for strengthening the abilities of each one of us so that we can excel in sales, contributing to the company's growth and performance year on year. It is also important to note that we are technical solutions providing company and not just selling products. We strongly believe that, this type of training program surely creates product awareness amongst all dealers, masons, applicators and end users and increases directly or indirectly their profit ratio of every individuals involved in this training sessions..

LOOKING AT MIRROR

One day all the employees reached the office and they saw a big advice on the door on which it was written: "Yesterday the person who has been hindering your growth in this company passed away. We invite you to join the funeral in the room that has been prepared in the gym". In the beginning, they all got sad for the death of one of their colleagues, but after a while they started getting curious to know who was that man who hindered the growth of his colleagues and the company itself.

The excitement in the gym was such that security agents were ordered to control the crowd within the room. The more people reached the coffin, the more the excitement heated up. Everyone thought: "Who is this guy who was hindering my progress? Well, at least he died!" One by one the thrilled employees got closer to the coffin, and when they looked inside it they suddenly became speechless. They stood nearby the coffin, shocked and in silence, as if someone had touched the deepest part of their soul. There was a mirror inside the coffin: everyone who looked inside it could see himself.

There was also a sign next to the mirror that said: "There is only one person who is capable to set limits to your growth: it is YOU." You are the only person who can revolutionize your life. You are the only person who can influence your happiness, your realization and your success. You are the only person who can help yourself. Your life does not change when your boss changes, when your friends change, when your partner changes, when your company changes. Your life changes when YOU change, when you go beyond your limiting beliefs, when you realize that you are the only one

responsible for your life. "The most important relationship you can have is the one you have with yourself".

The world is like a mirror: it gives back to anyone the reflection of the thoughts in which one has strongly believed. The world and your reality are like mirrors lying in a coffin, which show to any individual the death of his divine capability to imagine and create his happiness and his success. It's the way you face Life that makes the difference.

Our Vision

We aspire to be a world class organisation with advanced products, processes, unmatched performance and quality. We are committed to delight our stakeholders with unlimited solutions at our single hub-"ACECRETE"

Our Mission

To innovate continuously and provide unique solutions in construction technology.
